

YOUR ORVIS 200

The Finest . . . For Heavy Duty Spinning

Top Features Include:

New Full Automatic Pickup — two operating springs to insure quick, positive closing.

New No-Thrust Gears — maximum efficiency under load. 4.1 to 1 ratio for fast retrieve.

New Smooth-Set Drag — strong coil spring clutch is built into clutch knob.

New Rotating Case Brake — holds flyer and pickup steady while casting.

New Compact Design — Weight: 18 oz. Capacity: 320 yds. 12 lb. monofilament.

Easy Take-Apart — for quick and thorough cleaning and lubrication.

Price \$38.50

Spools 4.00

Two years of design and engineering work have produced the **one** reel that is built to stand the punishment of surf and ocean fishing, and take the pressure of heavy lines and big fish. Stainless steel pickup mechanism and handsome black anodized finish for complete salt water protection.

Operating and Maintenance Instructions

Spool Drag

The spool drag is accomplished by the clutch knob in front of the spool. Turn the knob clockwise to increase drag. To remove the spool, first remove the clutch knob by turning counterclockwise.

Anti-reverse

The anti-reverse click is operated by the round knob conveniently located where it can be reached without letting go of the handle. A half turn of the knob will put the click "on" or "off".

Foldaway Handle

For convenience in packing and carrying, the handle has a strong spring lock which enables it to be folded in towards the housing. Simply pull up on the handle grip and twist in either direction until the handle locks into position.

Care and Maintenance

After each use in salt water, wipe off your Orvis 200 with a damp cloth and then dry thoroughly. Be sure and clean out behind the spool. Then carefully oil all moving parts.

Remove cover screws and open the reel housing periodically, so that you can clean the interior moving parts. Replace the lubricants using light grease on the gears and spool shaft. Use light oil on these parts in cold weather.

Servicing the Pickup Assembly

Should it be necessary to dismantle the pickup assembly to replace worn parts such as roller, operating springs, etc., always disconnect the bail wire at the roller end first. This will allow the bail to swing free and make the following steps easier.

To replace the spring under the roller arm, remove the roller arm screw, insert new spring with one tip of it going in the small hole in the bottom of the spring socket and the other tip in the small hole in the roller arm. Hold roller arm down in position with thumb and forefinger and replace the screw.

To replace the parts under the cam end of the pickup, remove the cam screw. To reassemble first replace the plunger and plunger spring. Then replace the operating spring with its tips connected in the small holes in the socket and cam, hold cam in place with the plunger lined up in the plunger slot in the cam and replace the cam screw. To put tension on the operating spring, depress the plunger and rotate the cam counterclockwise until the plunger clicks up. Reconnect the bail at the roller arm.

Dismantling the Reel

All major parts of the Orvis 200 can be removed easily. Be sure to use only the correct size screw drivers on all screws; otherwise the heads may become damaged.

To remove the main gear, set the anti-reverse on and crank the handle backwards. The main gear and shaft will come free when the handle is off.

To remove the spool shaft, take out the screw in the operating slide and pull the shaft out.

To remove the rotating case, first take out the spool shaft, then insert a small rod through the holes in the side of the pinion gear to provide leverage and unscrew the rotating case clockwise — it has a right hand thread.

The Original ORVIS 100 Spinning Reel

ENGINEERED FOR EXTRA YEARS OF SERVICE AND ENJOYMENT

Rated 1st Choice by Fishing Guides and Champions

Ultra-Rapid Retrieve — 3.65:1 Lightweight — only 10 oz.
Large-Capacity Spool — 220 yds. of 8-lb. test line

In the few years since its introduction, the ORVIS 100 has also become the favorite spinning reel of thousands of fishing enthusiasts. The numerous reasons for this become quite apparent when you, so-to-speak, "lift up the hood" of an ORVIS 100 and become acquainted feature by feature with the built-in reasons for its superior performance.

Ask your dealer to show you the Orvis 100 for fresh and light salt water spinning — write for circular giving full details.

ORVIS 100 right hand model	\$29.50
ORVIS 101 left hand model	\$29.50
<i>both models include an extra spool</i>	
Additional spools	\$2.50
